To: Darin Christensen &lt;crmreadymix@yahoo.com&gt;

The previous email had the recommended seed mix. If George wants different species, that is fine, but it would be good to let us know. Let us know if you have any questions. Either way, keep your seed tags and let us know what roughening and seeding work you do.

If you are going to broadcast seed (vs. drill seeding), you will likely need to re-roughen the soils to prepare the seedbed in order for the seeding to be successful. Dragging chains or a section of chain link behind an ATV before, simultaneously with, or after seeding is usually an effective way to roughen the surface to allow the seed a better chance to take.
